The WebCAB, which includes a number of standardized measures within numerous assessment domains, is designed to serve as a resource for data collection efforts within Coordinated Specialty Care (CSC) clinics outside of EPINET. The goal of the CAB is to aggregate data across EPINET clinics in order to examine questions with statistical power.

**Benefits**

- Track which assessments have been completed by which clients over time
- Interpret client scores and use these data in a meaningful way for clinical intervention or quality improvement
- View and understand client improvement and change over time
- Download data immediately for use locally, for research or clinical purposes
- Be a part of a national database of 101 programs that are changing our understanding of FEP and how to effectively treat it
- Participate in national trainings on how to use and interpret CAB measures to improve clinical care
- Be among the first to hear about research findings and lessons learned from EPINET
- Work with infographic tools to view and compare your clinic data to aggregate

**Eligibility**

Clinics must meet criteria for providing CSC:
- Psychotherapy
- Medication Management
- Family Education and Support
- Case Management
- Work and Education Support
- Designated Team Lead

Participate in an orientation meeting with the EPINET National Data Coordinating Center to discuss process and eligibility

Agree to collect client data using the CAB. *At a minimum,* complete these measures for each client in the database:
- Demographic and Background items
- Duration of Untreated Psychosis and Pathway to Care items
- Any two standardized measures

For more information about EPINET and to access information and resources on early psychosis, visit our website at [https://nationalepinet.org/](https://nationalepinet.org/)
